

WATER COILS

This assembly will allow you to

1. bypass the coil
2. Drain the coil while bypassed and still attached and oven fired
3. disconnect (and remove) the coil and still have your hot water system function

You can use Shut Offs and union styles of your choice.

Just make sure you have a union after the shut off on both lines and a drain on the lower line on the coil side.

This will allow you to disconnect the coil or by pass and drain it
